Your code

```
1   import os
2   from flask import (
3       Flask, flash, render_template,
4       redirect, request, session, url_for)
5   from flask_pymongo import PyMongo
6   # This allows us to properly render MongoDB documents by their unique ID
7   from bson.objectid import ObjectId
8   from werkzeug.security import generate_password_hash, check_password_hash
9   if os.path.exists("env.py"):
10      import env
11
12
13  app = Flask(__name__)
14
15  app.config["MONGO_DBNAME"] = os.environ.get("MONGO_DBNAME")
```
